AMENDMENT

Assistant Commissioner for Patents
Washington, D.C. 20231

Dear Sir:

In response to the Office action dated May 22, 2002, issued in connection with the above-identified patent application, please enter the following amendments and remarks into the above-identified application.

In the Specification

A marked up version of the specification, showing inserted text underlined and deleted text in brackets, is included in Appendix B:

Please amend the paragraph beginning on page 10, line 14, and ending on page 10, line 25, to read:

- Referring to the exemplary embodiment as shown in Fig. 8, to engage shaving head 22 with neck piece 34 to form razor 20, posts 80a and 80b are flexed inwardly toward each other and pins 84a and 84b are inserted into cutouts 62. Thus, posts 80a, 80b and pins 84a, 84b form a head-engaging element for engaging cutouts 62 of connection members 52a, 52b, which together form a handle-engaging element to connect head 22 movably to handle 24. Once inserted into cutouts 62, pins 84a and 84b are retained therein by respective members 60. Thus, neck piece 34 is directly connected to and in contact with head 22. In addition, cam surfaces 88a and 88b of leaf springs 82a and 82b contact plateau-like projection 48 to bias head 22 into a rest position. It will be appreciated that projection 48 may be flush with
